## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gurantz et al US patent No. 5,550,869 in view of Kowalski et al Wo 99/39452.

Gurantz et al discloses a system comprising element 150 functionally equivalent to the claimed pilot processor operative to derive an error metric for of a plurality of signals (I and Q) received via an antenna 10, wherein the error metric for each signal is indicative of error in the sampling for the signals see col. 11, lines 9-10 and lines 29-31 a loop filter(164, 152 and 154) operative to combine the error metrics in adder 164 for the plurality of signals to provide a composite error metric see col. 11, lines 31-34 and to accumulate in integrator 154 the composite metric, see col. 11, lines 13-14 and wherein the sampling timing for the plurality of signals is derived based on the output of the loop filter (164, 152 and 154) see col. 11, lines 25-28.

However, Gurantz does not explicitly teach plurality antenna are configured to receive a plurality of signal instances. In the same field of endeavor, Kowalski et al teaches plurality

Art Unit: 2631

antenna are configured to receive a plurality of signal instances see fig. 1. It would have been

obvious to one skill in the art to incorporate such a teaching in Gurantz et al so as to increase

system performance since the at least two antenna would have allowed the processing unit the

enhanced capability to receive each signal using a respective antenna.

Allowable Subject Matter

3. Claims 1-36 and 39-49 are allowed.

4. Claim 38 objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and

any intervening claims.

5. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314

Application/Control Number: 10/044,235
